

Real Estate Acquisition & Right-of-Way

RWG lawyers regularly advise public agencies on the acquisition of real property and right-of-way for public use, including public facilities, parks, parking lots, and public infrastructure projects, such as light rail expansion projects, road widening and extension projects, and road realignments, freeway interchange projects, storm drain easements, grade separation projects, flood control easements, water transmission lines, and sewer lines. RWG's team approach and early involvement in the pre-acquisition phase helps clients to resolve many of the acquisitions by negotiated settlement and minimize the legal issues in any filed eminent domain proceedings.
